## DETAILED ACTION

### *Priority*

1. Acknowledgment is made of applicant's claim for foreign priority under 35 U.S.C. 119(a)-(d). The certified copy has been filed in parent Application No. 10/257,638, filed on 16 November 2002.

### *Drawings*

2. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the subject matter recited in claim 15 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered. No figure illustrates a spirally wound internal pressure armor in the inner liner, as recited in claim 15.

Corrected drawing sheets are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency.

Additional replacement sheets may be necessary to show the renumbering of the

remaining figures. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

### ***Claim Objections***

3. Claim 15 is objected to because of the following informalities: Claim 15 recites the spirally wound internal pressure armor layer "in" the inner liner. It is suggested that "in" be changed to "within", to show that the armor liner is inside the armor liner to protect it against very great external compressive forces. As it read, it appears that the armor is in or part of the inner liner. Appropriate correction is required.

### ***Double Patenting***

4. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double

patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

5. Claims 15-31 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-17 of U.S. Patent No. 6,739,355 in view of US. 3,858,616 to **Thiery et al.**

The '355 reference discloses a flexible, armored pipe comprising an inner liner and a spirally wound pressure armor having the structure recited in claim 1, including the a number of adjoining armor profiles, each having a number of recesses, at least two of the recesses being provided along the surfaces of the adjoining armor profiles forming a cavity therebetween, and a number of locking profiles, the locking profiles being adapted to hold together the adjoining profiles, wherein at least two recesses are locking recesses and further wherein the formed cavity accommodates a locking element. The '355 reference does not disclose providing this spirally wound pressure armor within the inner liner. The patent to **Thiery et al.** discloses a tight, flexible pipe including an inner layer (3) and an armouring layer (2) within the inner layer. It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the armouring layer of '355 to be in the inner

layer, as suggested by **Thiery et al.** in order to provide a layer that can withstand crushing stresses of pressures outside of the inner liner.
